Company Organization

Products Area

dealing with the development, implementation and marketing of brand products for Power Quality analysis, electrical consumptions monitoring, distribution grids remote control.

Systems Area

offering customers a complete service of design and development of products and systems, from feasibility study to prototype development.

R&D

engaged in research and development by participating, in collaboration with other companies and academic centers of expertise to relevant projects with a strong technological content.

Products

Systems Design

The design choices, always geared to meet customer requirements, pay attention to production costs and operational reliability.

TeamWare has adequate instrumentation to manage the development of complex projects; furthermore, has the equipment and expertise necessary to carry out verifications of electromagnetic compatibility and electrical safety according to reference standards.

TeamWare has acquired advanced knowledge in the application of high technologies in hardware, firmware and software.

R&D

Innovative research projects, characterized by a high technological content, having relapse in terms of industrial application.

Participation in European Community FP7 and H2020 (smart energy, securing critical energy infrastructure) and Italian wide national funded projects.

Award-winning innovative patented idea of full static reactive power controller for loads and distribution grid regulation (see **PowerWorx** @ www.greenlabeng.com)

Why choose TeamWare

Reliability

For nearly thirty years on the market, always growing

Support

Direct and immediate contact between our technicians and customers.

Efficiency

Expertise, professionalism, ongoing commitment

Complete solutions

360 ° expertise, products and systems integrated and effective

the best technology at the best value
